

RO&Ming with Lil Episode 8

Choosing environmental complexity in VROOM and OMO assessments

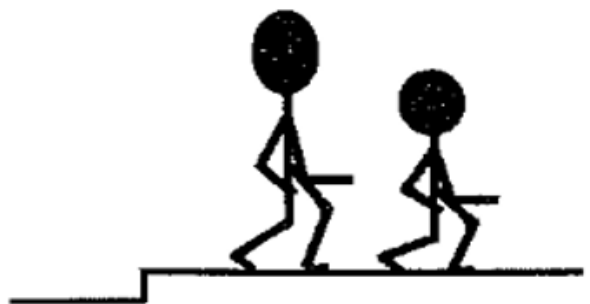

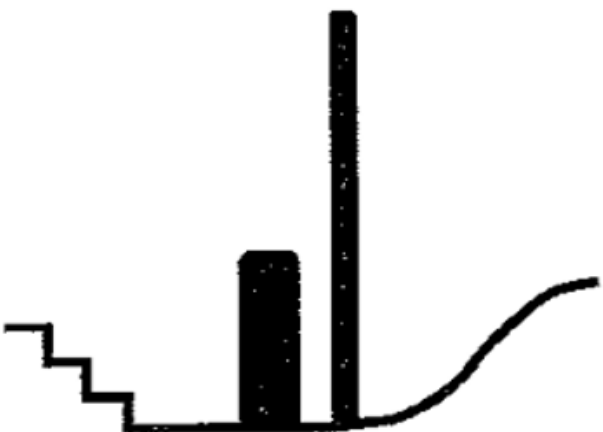

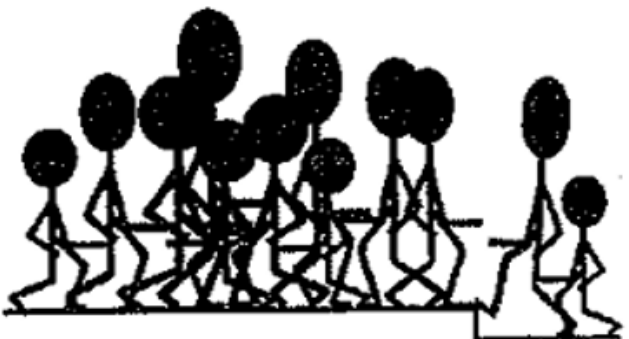

lil@deverell.net

Introduction to Episode 8

- Orientation and Mobility (O&M) specialists need to think about environmental complexity to build a client's capacity and confidence in community travel.
- We need to sequence assessment and instruction from simple to complex environments.
- Environmental purpose (residential, semi-business, business) is not the same as environmental complexity.
 - Crossing at the traffic lights in the city can be easier than crossing an uncontrolled residential road.
- The O&M Environmental Complexity Scale provides a way to sort any environment in the world into one of 6 levels.

O&M Environmental Complexity Scale

		Static, uninhabited	Dynamic, social			
		No movement; predictable	Pedestrian-paced	Traffic-paced		
Simple	Level 1		Level 3		Level 5	
	Level 2		Level 4		Level 6	
Complex	Level 2		Level 4		Level 6	

Busy laneway

- Narrow crossing but...
- Continual traffic, delivery vans, faster than pedestrian-pace
- No infrastructure to support crossing decisions:
 - no traffic lights
 - no zebra crossings
 - no lines and signs
 - no islands
 - no chicanes
- Onus is on the pedestrian to make safe traffic judgements
- ECS Level 6!
 - if traffic is pedestrian-paced, the lane would be ECS Level 4

An aside...

- In Episode 5, Erica said she could recognise people by their gait
- Movement helps with recognition
- Erica's VROOM score was 29/50 – Formwork
- She can see outlines, but not internal details
- Can you recognise any O&M specialists who worked at Guide Dogs Victoria in 2009, from their line drawings in O&M Methods?...

Royal Easter Show

- Crazy crowds
 - ECS level 4 – cluttered, pedestrian-paced
 - people milling in all directions; queues blocking the path
 - any car coming through is pedestrian-paced
 - continual decision making in wayfinding, deciding to go left or right of oncoming pedestrians, need to use manners
 - it's exhausting!
- Crossing the central arena
 - ECS level 6 – faster than pedestrian paced, uncontrolled traffic
 - racecourse with horses; monster truck demonstrations
 - no infrastructure to guide crossing decisions – guess and go (ie, use scanning, time-distance traffic judgements, clear body language)

Clifftop in Black Rock

7am any day

- Bush path
 - ECS level 3 – clear, pedestrian-paced
 - no bikes allowed
 - few pedestrians & dogs on leashes
- Shared path –pedestrians and bikes
 - ECS level 5 – fast, controlled traffic
 - few cyclists give way to pedestrians
 - little traffic
- Beach Road, mid block
 - ECS level 6 – fast, uncontrolled traffic
 - MAMILs (middle aged men in lycra) cyclists travel in packs, seeking coffee

Midday on the weekends

- Bush path
 - ECS level 4 – cluttered, pedestrian-paced
 - a zillion pedestrians in lycra; dog walkers
- Shared path
 - ECS level 5 – fast, controlled traffic
 - few cyclists give way to pedestrians
- Beach Road, mid block
 - ECS level 6 – fast, uncontrolled traffic
 - MAMIL cyclists, as singles or packs
 - constant stream of cars, some trucks

Elderly man in a nursing home

- Bedroom to en-suite bathroom:
 - ECS level 2 – uninhabited with obstacles
 - furniture, doorway
- Bedroom to dining room:
 - ECS level 4 – cluttered pedestrian environment
 - corridor clutter: Zimmer frames, wheelie walkers, walking sticks, commodes
 - tables & chairs, other residents
- Outdoor paths around nursing home:
 - ECS level 3 – clear, pedestrian-paced
 - few pedestrians, little traffic in car park (max 5 kmh)

Supermarket and Bunnings (big box hardware)

- ECS level 3 or 4 (depends how busy)
- Orderly numbered aisles; end aisle displays
- Some obstacle display
- Customer service desk; meet and greet
- Staff in uniforms
- Customer queues

Planning ordinary VROOM and OMO assessments

- Skills required for different environments are cumulative across the 6 levels of complexity (eg, assume level 5 has skills for levels 1-4)
- Choose 2 different levels of environmental complexity
- Compare, looking for patterns/habits in behaviour and exceptions, between two environments
 - simple v complex
 - static v dynamic
 - stable v unpredictable
 - familiar v unfamiliar
 - controlled v uncontrolled
- Bookend the client's capability, easy and challenging, eg:
 - Home (ECS 2, 3 or 4) v shops (ECS 3&4) & road crossings (ECS 5&6)
 - Empty school classrooms/corridors/playground (ECS 2 or 3) v lunchtime chaos (ECS 4)
 - Office workplace (ECS 3 or 4) v out to lunch with road crossings (ECS 5 or 6)

Framing the assessment challenge

- Choose 3 tasks/goals per environment
- Look at client's incidental mobility, not just route travel
 - Freedom of movement
 - Sticking to a path or departing from the tracks?
 - Orientation skills/strategies
 - Dealing with unpredictable events
- Choose tasks that require precision, visual acuity, asking for assistance
 - Is the client resourceful in meeting the brief?
 - Does the client use self talk to navigate the process?
- Assess memory for instructions, planning, sequencing, self-regulation
- Ask about anything curious; find out what is normal for the client
